DEAR STUDENTS!

The University of Maribor, Faculty of Health Sciences is an internationally recognized, respected, excellent educational and scientific-research institution. At our state of the art equipped faculty and with exceptional employees and students, we offer a vertical system of higher education with modern and internationally comparable study programmes in the field of health sciences. The education is supported by latest information technology, a modern equipped simulated clinical environment and a library with the latest literature.

We develop and implement study programmes on the basis of scientific research work, with the help of renowned domestic and internationally recognized guest professors and on the basis of multiple years of experience.

A rich network of international connections and cooperation with reputable institutions offer students and staff the acquisition of knowledge and experience at the global level in the context of mobility. Numerous international and domestic research projects enable students to engage in research at all levels of study, as we at the faculty are aware of the importance and necessity of developing new knowledge. To overcome problems with their study, we offer students an excellent tutoring system that includes student tutors, higher education teachers and mentors in practice, as well as rich extracurricular activities. The University of Maribor Career Centre offers support to graduates creating their professional path.

For implementation of education, we strive to individual and student-oriented educational and research work. Contemporary and innovative programmes provide graduates with excellent opportunities to continue their studies, as well as excellent employment opportunities at home and abroad.

Students and staff form an academic community, based on mutual understanding and respect. In the new academic year 2020/2021 I wish all freshmen and other students a successful acquisition of knowledge and experience that you can use at your professional or private life path.

Dean

ABOUT THE FACULTY

The University of Maribor, Faculty of Health Sciences (UM FHS) has been operating since 2007, when as the first college for nursing studies, it transformed into a faculty. The higher school of nursing was established in 1993, from 1995 it acted as the college for nursing studies of the University of Maribor.

The EU requirements, when Slovenia was joining the EU, led to the transformation of the **professionally oriented 1st cycle study programme Nursing Care** in year 2002. The programme is harmonized with European programmes on the basis of European Community Directives (EU 77/452, EU 77/453).

The development of UM, FHS was very intense. Parallel the scientific-research, professional and pedagogical activities were developed. In academic year 1999/2000, as the first institution in Slovenia, the UM FHS started to develop postgraduate specialist study programmes (Gerontological Nursing Care, Community Health Care, Clinical Dietetics, Informatics in Health and Nursing Care and Perioperative Nursing Care).

In the academic year 2007/2008 we offered bologna postgraduate study programmes, 2nd cycle study programme Nursing Care and study programme Bioinformatics. In academic year 2009/2010, in collaboration with the Faculty of Organizational Sciences, we offered the 2nd cycle study programme Management in Health and Social Organization and in academic year 2014/2015 we implemented at the 2nd cycle study programme Nursing Care two new study fields: Nursing Care and Emergency Situations in Health Care. A year later we included the study field Preventive and Clinical Nutrition and Gerontological Nursing Care. In Academic year 2016/2017 we were **first in Slovenia to introduce a doctoral study programme Nursing Care**. In academic year

2019/2020 UM FHS started to offer a renewed study field Preventive and Clinical Nutrition at the 2nd cycle study programme Nursing Care. UM, FHS is constantly updating its study programmes and curricula, as it strives to respond to latest needs in society. With scientific-research work and with included domestic and foreign renowned higher education teachers and clinical experts, it takes care of the nursing care discipline in Slovenia and abroad. We are extremely proud to be the first to develop the model and **new study field of Advanced Nursing Practice at the 2nd cycle Master's study programme Nursing Care, called Integrated Treatment of Chronic Patients**, starting in academic year 2020/2021.

Excellent study conditions, good results of graduates, modern didactic methods and approaches, variety choice of study contents, guest appearances of renowned domestic and foreign higher education teachers, diverse student pulse and extracurricular activities, high percentage of employability of graduates and home and abroad, international student exchange, education supported by state-of-the-art information-communication technology and a state-of-the-art simulation centre and classrooms are just some of the reasons that convince students to choose their study path and career path at the University of Maribor Faculty for Health Sciences.

UM FHS is one of the most recognized and desired higher education institutions within the University of Maribor and it is also one of the most desired faculties among Slovenian nursing faculties and schools. With excellence in education, research and international cooperation with many reputable universities and institutions UM FHS has gained a reputation and recognition in the domestic and international arena..

FACULTY DEPARTMENTS

Department for Nursing Care

Head: act. Sr Lect Vida Gönc, Msc

The department performs tasks on the ongoing education of new staff, linking research deviations in practice, integrating scientific findings into education and in this way represents the majority of theories in practice. The mission of the department is to educate competent professionals in the field of nursing care, who will be trained to perform modern nursing care.

Department for Bioinformatics

Head: Assist Prof Aleš Fajmut, PhD

The key task of the Department for Bioinformatics is to care for a quality implementation of the 2nd cycle study programme Nursing Care. It also makes an important contribution to the acquisition of nursing students' competencies in their entire education in the fields of science, informatics and computer science, health simulations and statistics, and related research methods. At the same time, the department represents a bridge between basic and applied research in health care.

Department for Medicine and Physiotherapy

Head: Assoc Prof Dušan Mekiš, PhD

The department determines and advises the level and scope of lectures in the education of nursing students and proposes research programmes in the field of medical subjects according to innovations in the field.

Department for Interdisciplinary Studies

Head: Prof Sonja Šostar Turk, PhD

The department carries out pedagogical and research process in the field of public health, applied microbiology, sociology, ethics, foreign languages and law. It carries out intensive research work on many European projects, in which it actively involves students of nursing and health sciences.

FACULTY INSTITUTES AND CENTRES

Institute for Nursing Care

Head: Prof Majda Pajnikihar, PhD, FAAN, FEANS

The basic task of the Institute is to take care of the development of nursing as science, discipline and profession. Through many years of research work and international cooperation, the Institute strives to contribute to the international recognition of the faculty, to the development of modern and current educational programmes, based on research results. The Institute's concern is to contribute to the development a caring, humane, safe, effective and by theories and evidence

supported profession, science and discipline of nursing care. Special attention is paid to the involvement of students in research projects in order to develop knowledge and awareness of the importance of research, theories and evidence-based nursing. Current and future generations of nursing students are building blocks of the development of the profession and crucial for the further development of a recognizable and valued discipline of nursing care.

Research Institute

Head: Assoc Prof Gregor Štiglic, PhD

The Research Institute, together with the Institute for Nursing Care, takes care of the coordination of applications and the implementation of research and development projects, and at the same time encourages the involvement of students and employees in research work. The result of successful national and international research work is a number of active and completed projects that have a high applied value for the profession in the field of health sciences.

Institute for Health and Nutrition

Head: Professor Emeritus Dušanka Mičetić Turk, PhD

The aim of the Institute of Health and Nutrition is to acquire new knowledge and its use in the pedagogical work at higher education institutions and in the economy. It deals with researching nutrition and nutrition-related diseases, quality of life of healthy and sick children, adults and the elderly, growth and development of a healthy population of children, compared to chronically ill and caring for the elderly from a bio-psychosocial aspect.

Institute for Balneology and Climatology

Head: Prof Sonja Šostar Turk, PhD

The Institute of Balneology and Climatology enables the connection of medicine and public health within research projects in the field of the impact of the environment on human health, spa activities, with an emphasis on thermal waters and Slovenian health tourism..

Centre for the Use of Information and Communication Technologies in Health Care

Head: Marko Uršič, MSc

The centre operates with the aim of ensuring uninterrupted contemporary educational and research work at the faculty. The basic activity of the centre is the maintenance and development of the computer and communication infrastructure of the faculty, as well as the care for the security of systems and their continuous operation.

Centre for International Cooperation

Head: /

The centre takes care of international cooperation and scientific research activities of the faculty in the field of international projects. The number of international mobility for students and staff in the Erasmus + program is growing from year to year, as well as the number of bilateral agreements and projects with partner institutions.

Simulation Centre

Head: Assoc Prof Miljenko Križmarić, PhD

The Simulation Centre at the faculty was the first of its kind in this part of Europe at the time of opening. Here, nursing and health science students acquire knowledge and skills from clinically demanding areas on special models in a controlled clinical environment that is as similar as the real one. In this way, students connect theory with practice and learn how to act correctly so that they cannot harm the patient in case of wrong decisions.

APPLICATION PROCEDURE

Decided if you want to study at the University of Maribor and ready to proceed with the application?

Please proceed in line with the following steps:

1. Apply for an individual international student's account at <https://studentexchange.um.si/ADPrijava.aspx>.
2. Complete electronic Application Form and Learning Agreement (Student exchange program: Erasmus+ study)
 - You have to send us our version of Learning Agreement filled out in the online application.
 - You can choose subjects from only TWO different faculties.
 - The majority of chosen subjects in your LA has to be from the faculty that covers study areas, specified in the Erasmus+ Interinstitutional Agreement between your home university and the University of Maribor.
 - Please check if the subject is offered in your chosen semester - check the semester in the Course Catalogue
3. Print out the fully completed Application Form with Learning Agreement and obtain signature from Erasmus academic coordinator at your home university. University stamp is also obligatory!
4. Request a Transcript of Records from your home university. The transcript can be in any form including computer print outs from your university registry's office. It must be in English.
5. We require an assessment of your English language skills, it has to state the level of B1 at least in line with CEFR, so you can either (choose 1 option only):
 - send us a document, stating your English language knowledge level, signed and stamped by English teacher from your home institution;
 - send us a copy of any English language certificate you might have.

Printed results of your OLS test are not valid! Please note that if we, after your arrival to the University of Maribor, assess that your English language skills are below the level you will state in one of the above mention documents (so the information you will send us is not accurate), we can decide you are no longer welcome as an Erasmus+ student at the University of Maribor.

6. Complete the form Claim for establishing unique personal number – EMŠO number.
7. All required documents:
 - a. Application Form with selected subjects signed and stamped by your home university,
 - b. Transcript of Records in English,
 - c. Certificate of your English language knowledge,
 - d. Claim for establishing unique personal number – EMŠO number,
 - e. Statement for giving consent to the University of Maribor to use your personal information in line with EU law on data protection (General Data Protection Regulation or GDPR), must be sent by your Erasmus coordinator or with your coordinator in courtesy copy to the following email address: incoming.erasmus@um.si.

Your documents will be reviewed by the main International Relations Office and by the selected host faculty. In case you are accepted for Erasmus study at the University of Maribor, we will send you an Erasmus acceptance letter and a signed Learning Agreement to your email address.

EDUCATIONAL ACTIVITY

UNDERGRADUATE STUDY PROGRAMME NURSING CARE

Study programme title

Nursing Care

Type

Professional (Undergraduate)

Cycle

First

Duration

3 years (6 semesters)

Scope

180 ECTS

Head of the study programme

Sr Lect Klavdija Čuček Trifkovič, PhD

The professional 1st cycle study programme Nursing Care, carried out by the University of Maribor Faculty of Health Sciences is a contemporary study programme, in line with the principles of the European directives on the regulated profession, the Bologna Declaration and other domestic and foreign guidelines. The study of Nursing Care at the University of Maribor Faculty of Health Sciences enables the formation of excellent health professionals who, after completing their studies, are qualified for independent and competent implementation of the profession of a nurse. The study at this programme is focused on maintaining health care, professional attitude to work, general education, independent thinking, the ability to make quick and correct decisions, while maintaining a heart culture and a sensitive and ethical attitude towards patients and colleagues.

SYLLABUS

FIRST YEAR

WINTER SEMESTER

LECTURER	SUBJECT	ECTS
Pajnkihar	Nursing Care	10
Glaser	Anatomy, Physiology, Pathology	5
Trobec, Tičar	Ethics with Philosophy and Nursing Care Legislation	3
Lorber, Štiglic	Introduction to Research and Information Communication Technology	3
Goriup	Sociology of Health and Illness	3
Fajmut	Biophysics, Biochemistry	3

Lorber, Turk Z.	Elderly Nursing Care with Geriatrics and Palliative Care	3

POSTGRADUATE STUDY PROGRAMMES

NURSING CARE

Study programme title

Nursing Care

Type

Master's (Postgraduate)

Cycle

Second

Duration

2 years (4 semesters)

Scope

120 ECTS

Head of the study programme

Assoc Prof Jadranka Stričević, PhD

University of Maribor Faculty of Health Sciences carries out the 2nd cycle study programme Nursing Care with five study fields:

- Nursing Care (full time and part time study)
- Emergency Situations in Health Care (full time and part time study)
- Gerontological Nursing Care (part time study)
- Preventive and Clinical Nutrition (full time and part time study)
- Integrated Treatment of Chronic Patients (full time and part time study).

The development of health sciences, globalization of the European and world space requires the constant adaptation of the higher education and research system. Society expects a lot from nurses, so it is necessary to pay special attention to their education which has to be in line with the importance, responsibility and increasing complexity of their role. In the process of educating nurses, it is necessary to formulate the standpoint that their function rises to a higher quality level of management of the entire nursing process. Through her activity, the nurse realizes the educational function of students as well as patients and their relatives, therefore the University of Maribor Faculty of Health Sciences developed the postgraduate 2nd cycle study programme Nursing Care. The programme is an upgrade of the undergraduate 1st cycle professional study programme Nursing Care.

Graduates can be employed in all EU member countries.

NURSING CARE

Study field NURSING CARE

Mode of study: full time and part time

The 2nd cycle study programme Nursing Care, study field Nursing Care enables students to deepen their knowledge in broader professional fields of nursing, students are trained to find new sources of knowledge in professional and scientific fields, can use modern scientific research methods in a wider range of problems and in new or changed circumstances. Graduates will also be trained to take responsibility for managing the most demanding work systems and to develop critical reflection, social and communication skills to lead group or team work in individual areas of nursing in the processes of globalization and specialization in modern health trends.

NURSING CARE

Study field EMERGENCY SITUATIONS IN HEALTH CARE

Mode of study: full time and part time

The 2nd cycle study programme Nursing Care, study field Emergency Situations in Health Care enables education of students to work in teams for the critically ill and severely injured in the pre-hospital (family medicine clinics, pre-hospital units, motorcyclist ambulance, helicopter emergency medical unit) and hospital environment (emergency department, intensive care units and intensive care units). The development of emergency medicine and the establishment of unified emergency centres throughout the country affect the organization of emergency medical services at the primary and secondary levels with the aim of a continuous, quality care of the patient/injured from the occurrence location to the hospital bed. The study provides students with a targeted education for teamwork and partially independent decision-making for the critically ill and

severely injured. They will also gain knowledge for working in complex and unpredictable circumstances, for independent work and work in medical teams, where they deal with complex professional issues, critical assessment of patients in health emergencies, for quality and reliable early triage of patients and injured in the field and at emergency centres, with knowledge of assessment scales and for the implementation of emergency diagnostic procedures and participation in therapeutic measures in the field and in the emergency centre.

Flis	Emergency Situations in Surgical Intensive Care	5

NURSING CARE

Study field GERONTOLOGICAL NURSING CARE

Mode of study: full time and part time

The 2nd cycle study programme Nursing care, study field Gerontological Nursing Care enables students, in addition to specific knowledge (nursing, treatment, etc.), also to acquire knowledge of integrated knowledge of old age, which is a condition for successful interdisciplinary cooperation in the care of chronically ill and elderly people. The rapid growth of the elderly population in Slovenia in recent decades and the consequent increased and changed need for health services for the elderly population, many new insights in the field of nursing and care, as well as the implementation of increasingly demanding standards of nursing and care in Slovenia are just the most important reasons for nurses, like other health professionals, to develop and improve their competencies with the aim of providing high-quality nursing and care for the elderly. The implementation of the principles of quality aging, intergenerational coexistence and related ongoing and planned reforms in the health and social field dictated the need to educate highly qualified professionals in the professional and scientific field of gerontological nursing.

Štiglic	The Role of Information and Communication Technologies in the Life of Elderly	5

NURSING CARE

Study field PREVENTIVE AND CLINICAL NUTRITION

Mode of study: full time and part time

The 2nd cycle study programme Nursing Care, study field Preventive and Clinical nutrition is in coherence on the national level. Food consumption can act as a risk factor that endangers the health of the individual, or as a protective factor that strengthens health and improves quality of life. Epidemiological, biochemical and molecular-biological research has shown a link between the occurrence and course of certain chronic diseases and lifestyle and diet. The goal of a balanced diet is to maintain and improve health and thus quality of life, as well as to prevent food-related symptoms of deficiency (e.g. dermatitis, eye and brain damage) and deficient diseases (e.g. pellagra, rickets, scurvy), as well as overeating, which can lead to the emergence of many diseases of civilization. Through education and targeted promotion of a healthy diet at all stages of life, we contribute to better eating habits and nutrition, and thus to maintaining and strengthening the health of the population of Slovenia.

NURSING CARE

Study field INTEGRATED TREATMENT OF CHRONIC PATIENTS

Mode of study: full time and part time

The study field Integrated Treatment of Chronic Patients enables gaining advanced knowledge from the specialized field of integrated preventive and integrated treatment of patients with chronic contagious diseases and critical awareness about current issues, important for this practice. The study contents enable a targeted education of students for preventive activity, health promotion, health education and comprehensive treatment, as well as monitoring of patients with chronic diseases such as asthma, chronic obstructive pulmonary disease, diabetes and high blood pressure. The student upgrades, deepens and expands knowledge and skills in the field of advanced practice, namely the science of nursing care with theoretical foundations, research and evidence-based practice, anatomy, physiology and pathophysiology, applied pharmacology, holistic assessment of health and clinical decision making, interpersonal relationships and therapeutic communication, leadership and management for quality and safe treatment of patients. The study also enables a clear career development of a nurse in the health care system and is comparable to the education of nurses in Western European countries.

SYLLABUS

FIRST YEAR

WINTER SEMESTER

LECTURER	SUBJECT	ECTS
Pajnikihar, Šostar Turk	Research and Research Methodology	10
Pajnikihar	Theories, Concepts and Practice of Nursing	10

MANAGEMENT IN HEALTH AND SOCIAL ORGANIZATION

Study programme title

MANAGEMENT IN HEALTH AND SOCIAL ORGANIZATION

Type

Master's (Postgraduate)

Cycle

Second

Duration

2 years (4 semesters)

Scope

120 ECTS

Mode of study

Full time and part time

Study programme coordinator

Prof Sonja Šostar Turk, PhD

Assist Prof Mateja Lorber, PhD

The 2nd cycle study programme Management in Health and Social Organization is an interdisciplinary study programme, carried out with the University of Maribor Faculty of Organizational Sciences.

The 2nd cycle study programme Management in Health and Social Organizations provides students with in-depth knowledge in the professional and scientific field of management in health and social care and taking responsibility for managing the most demanding work systems. Modern management is a product and one of the fundamental components of modern societies. Without management methods and techniques, there would be no successful and effective organizations in various areas of human activity. The great role of

modern management in the development of modern organizations is also the reason for the constant emergence of new knowledge in this field and thus also new organizational forms. The study program takes into account the specifics that are present in the health and social field, i.e. patients, residents of social care and other institutions and employees. It enables graduates a competent and flexible leadership and management at the strategic and operational level, as well as to make operational changes of an institution's operation, according to requirements and changes in the environment.

SYLLABUS

(in cooperation with the University of Maribor Faculty of Organisational Sciences)

FIRST YEAR

(in academic year 2020/21 carried out by the Faculty of Organisational Sciences)

WINTER SEMESTER

DOCTORAL STUDY PROGRAMME NURSING CARE

Study programme title

NURSING CARE

Type

Doctoral (Postgraduate)

Cycle

Third

Duration

3 years (6 semesters)

Scope

180 ECTS

Mode of study

Part time

Study programme coordinator

Prof Majda Pajnkihar, PhD, FAAN, FEANS

The 3rd cycle study programme Nursing Care enables students an education in the field of nursing care. Students will be able to develop scientific research work within nursing as a scientific discipline for practice and education. This will enable the connection of theoretical models and concepts in practice and the application of scientific evidence, which is the basis for evidence-based health care. The study program represents the core in the further development of scientific research work at higher education and research institutions and will enable the reduction of the gap between theory and practice, the development of science to support the development of nursing as a scientific discipline in Slovenia.

Gained competences of doctoral graduates

- ability to identify a given scientific research problem, its analysis and possible solutions (master research methodologies and methods and processes in nursing);
- use of information and evidence from the scientific literature and other sources to systematically analyse, document and prepare evidence to support nursing;

- ability to analyse, evaluate, develop and integrate theoretical models in the process of nursing, practice and introduction of concepts of theories that are the basis for theoretically grounded nursing;
- ability to theoretical and practical assessment, critical evaluation and summarization of research-based issues arising from nursing practice;
- ability of ethical reflection and commitment to the development of the core knowledge and scientific discipline of nursing care.

The study program also enables the deepening of knowledge in the field of research, research methodologies and methods, theories, concepts and practices of nursing based on scientific evidence.

SYLLABUS

FIRST YEAR

WINTER SEMESTER

SUMMER SEMESTER

LECTURER	SUBJECT	ECTS
	PhD Thesis	30
Total		30

* individual consultation with a mentor

Prior to enrolment, the student chooses a mentor and has a written draft of the topic of the doctoral dissertation or a selected narrow field in which he intends to write the PhD thesis.

Conditions for completing the study

The student will complete the study when he / she fulfils all the obligations stipulated by the study program and writes and successfully defends his / her doctoral dissertation, thus collecting a total of at least 180 ECTS. The condition for the completion of the 3rd cycle study program in Nursing Care is the successful defence of a doctoral dissertation in accordance with the Statute of the University of Maribor and the Rules and Regulations on Doctoral Studies at the University of Maribor. The candidate will be able to defend the doctoral dissertation after completing the doctoral study obligations (i.e. when he / she has applied for a doctoral topic and written a doctoral dissertation and received a positive evaluation of the dissertation evaluation committee in accordance with the rules). In particular, the doctoral dissertation must satisfy the condition of originality and must represent an original scientific contribution in the field it deals with. In addition, the results and methodology of the dissertation must be subjected to critical review by the international scientific community, by publishing an article in one of the publications from Science Citation Index (SCI) list, before being promoted to the title of "Doctor of Science".

STUDENT COUNCIL AT UM FHS

At the University of Maribor Faculty of Health Sciences, students strive to actively and, in as large a number as possible, participate in extracurricular activities, projects, promotions, etc. and are members of commissions, through which they participate in the management of the Faculty of Health Sciences and the University of Maribor.

Core activities:

- maintaining connectivity and communication between students of the Faculty of Health Sciences;
- promotion of the University of Maribor Faculty of Health Sciences and the field of nursing care;
- development of individuals;
- organization of social (Freshman Party, motivational weekend ...) and charity events (blood donation, help to the socially disadvantaged ...) and promotion of a healthy lifestyle (health week, no elevator day ...).

Student Council:

- discusses and gives opinion on all general and specific issues of higher education activities of the university member in relation to the rights and duties of students;
- elects representatives in the University of Maribor Student Council;
- gives an opinion on the candidates for a dean or candidates for director of another university member;
- performs other tasks if so provided by law, statute or other general act of the university.

INTERNATIONAL COOPERATION

International activity at the Faculty for Health Sciences is the core that connects the development of educational, research, professional and development work at the faculty. In recent years, the faculty has managed to establish active partnerships and cooperation with reputable and recognizable educational, scientific-research and clinical institutions at the global level.

International cooperation in the field of education is reflected in the development of current, modern and internationally comparable study programmes at all levels of education. Internationally recognized professors are also involved in education and the transfer of good practices at the faculty into existing and newly designed study programmes. At the faculty we have many years of experience in organizing and conducting clinical exercises in foreign health institutions abroad. In 2019 we started hosting American students from the George Washington University School of Nursing who perform obligations within their education and get to know the students and employees of our faculty, while transmitting their culture in the field of education and practice.

The international activity of the faculty closely connected it with partner and recognized foreign institutions in the field of scientific research. Scientific research work and mutual cooperation of higher education teachers and associates, researchers and students of our faculty at partner institutions abroad has been established. The results of international activity are evident in many active and completed research projects.

The international involvement of the faculty enables our employees and students to study at foreign universities, in the clinical and research environment in the field of health sciences. It allows students to choose mentors from a wide range of international universities. The number of international mobility for students and staff in the Erasmus + programme is growing yearly, as well as the number of bilateral agreements and projects with partner institutions and the number of foreign visiting professors. International mobility is also facilitated by inter-institutional agreements, the Slovenian NFM EEA Scholarship Fund, CEEPUS networks, participation in projects, summer and winter schools and similar programs.

Diverse international cooperation also enables us to yearly organize and conduct our traditional international scientific conference "Research and education in nursing care", where higher education teachers and students from reputable foreign and domestic universities present current scientific research contributions for safe, effective, humane and person-centred health care. The Faculty of Health Sciences is an internationally recognized and reputable institution.

RESEARCH ACTIVITY

An important mission of UM FHS, in addition to the implementation of educational work, is also the activity in the field of scientific research, in which the faculty has experienced great development in recent years. The success and quality of research work at UM FHS is mainly reflected in the increased number of acquired international, bilateral and national projects in various fields, in the preparation of new projects and the increase in additional employment in the field of research. Research in various fields of health care is one of the key competencies that our students acquire during their studies.

Research activity at UM FHS represents an important link between practice and education and in this way contributes to the recognizable social development of the discipline of nursing and health care. It is necessary to point out many areas that interdisciplinary research work at UM FHS is linked with. The faculty is connected through its research work with a large number of UM faculties, as well as with a wide network of international partner institutions.

Four institutes (Institute for Nursing Care, Research Institute, Institute for Balneology and Climatology and Institute for Health and Nutrition), in addition to organizing and conducting scientific research work, also take care of international cooperation and cooperation with other organizations, organizing various events to acquaint students and staff through research work, involving students in research work and transferring knowledge into practice.

Domestic and international projects

In recent years, UM FHS has greatly strengthened international connectivity which is mainly reflected in the number of submitted and acquired projects. The number of registered and successfully obtained projects at UM FHS increased in the period between 2012 and 2019. A total of 148 project applications were submitted, of which 66 (44.6%) were successfully accepted, most of them in 2019 (15 accepted projects). The number of ongoing projects in the before mentioned period in a given year ranges from 7 (in 2013) to 21 ongoing projects (2019). Most of the projects involve students and researchers from various UM FHS research groups.

Student projects

UM FHS strives to involve students as actively as possible in research work and thus enables them to gain many practical experiences and skills, new knowledge and competencies for their work. Students' research work also contributes to raising awareness and promoting health and a healthy lifestyle. We encourage students to get involved in research work and cooperation with researchers from UM FHS within student projects and other projects at the faculty. This way, students also participate in publishing research work.

»Research afternoon«

UM FHS also organizes "Research Afternoons", during which higher education teachers, researchers, students, graduates and external collaborators meet and present various research work and achievements from various research fields in which UM FHS researchers are active.

With such events we want to bring the research work closer to all participants in the pedagogical and research process and thus enable better and easier interdisciplinary connection of research groups within UM FHS with students and external collaborators.

Research environment

At the faculty, we strive to provide students and employees with a positive work environment, within which we include innovative teaching methods and modern learning environments.

Simulation centre

Simulation is a modern method of learning and teaching and plays an important role, especially in nursing care, as it prepares students for practical situations that they will encounter in a hospital environment and in this way ensuring patient safety. UM FHS has a state-of-the-art simulation centre that enables learning and research work on professional medical simulators.

Integrating gamification into the learning process

In addition to simulation, the presence of gamification, which represents a new strategy of teaching and learning by including elements of games, is also gaining ground in the learning process and in the field of research work. By including gamification in the course units, we want to motivate students and encourage them to participate more actively. Gamification is provided using a variety of interactive tools.

Laboratory

Students of the University of Maribor, Faculty of Health Sciences are able to use the laboratory for microbiology and molecular biology, where they can perform practical work under assistant's supervision. The laboratory is equipped with modern equipment and provides the use of a dry heat sterilizer, autoclave, biological chamber, incubator, colony counter, PCR machine, microcentrifuge, thermoblock, electrophoresis unit, transilluminator for gel imaging and digestorium.

ADVANTAGES OF STUDYING AT UM FHS

UM FHS is an internationally recognized and excellent educational and scientific research institution which is associated with many reputable domestic and internationally recognized faculties and institutions. The faculty is known for its respectful, partner and friendly atmosphere which, combined with our reputation, places us among one of the most recognized and desirable educational and scientific research institutions at home and beyond.

At a state of the art equipped faculty with excellent employees, we offer a vertical system of higher education. We were first in Slovenia to carry out postgraduate specialist and master's study programmes in the field of nursing care and health sciences as well as doctoral study programme Nursing Care. We are extremely proud to be the first to develop a model and a new field of study at the master's study programme - Advanced Nursing Practice. The study option which follows modern standpoints of foreign study programmes, is implemented from academic year 2020/21. By designing and implementing study programmes, we respond to the needs of society and the environment, that is why the study programmes are updated and implemented annually on the basis of scientific research with the help of many domestic and internationally recognized visiting professors and clinical experts.

Modern, innovative and up-to-date study programmes provide graduates with excellent employment opportunities. The employability and employment of graduates of our faculty is high at home and abroad, as almost 90% of graduates on average get a job in less than a month after completing the study programme. Students, together with their employees, form an academic community and express a high level of satisfaction with education and with the providers of the pedagogical and non-pedagogical process.

The modern equipped faculty offers students the acquisition of knowledge in the first state of the art equipped simulated clinical environment with the support of higher education teachers, associates and practitioners.

A great privilege of the faculty is an excellent wide network of learning bases with many excellent mentors who offer students the acquisition of knowledge, clinical expertise, patient work and last but not least good and humane interpersonal partnerships with patients and their families. The education is supported by modern information technology and a library with the latest literature. The emphasis is on student-oriented educational and research work.

Our faculty has an exceptional advantage, as it cooperates with internationally renowned lecturers, professors and researchers from all over the world in the field of education and research. They are involved in the pedagogical process, conduct numerous current and useful lectures and workshops for all employees and students. We

encourage students at all levels to perform research work in the framework of numerous international and domestic research projects, among which student projects should be highlighted which are an excellent opportunity for students to contribute to the transfer of new knowledge into practice.

We pay special attention to the promotion of international mobility. We enable students to visit internationally recognized institutions from around the world. During the mobility, students have the opportunity to gain new knowledge and valuable experience, meet renowned experts, new friends and places, and thus broaden their horizons.

An excellent tutoring system is available to students as a support during their study, that includes student tutors, professors, associates and practice mentors. The established tutoring system serves to guide students in integrating into the learning environment, as motivation throughout the study period, helps solving problems and providing answers to questions, as well as successful completion of studies, personal development and preparation for future challenges in professional and personal life. The University of Maribor offers its Career Centre which helps graduates plan their careers.

The Student Council of the faculty is responsible for maintaining close connections and communication between students, employees and nurturing the belonging to the faculties. The active and constructive work of students contributes to the promotion, development and mutual care, as well as the organization of numerous social and charitable events and other extracurricular activities. The advantage of organized extracurricular activities at our faculty is the great variety of events and within those each of the students can find something for themselves.

Why study at University of Maribor Faculty of Health Sciences?

- An excellent partnership of employees, mentors and students.
- The first faculty of health sciences in Slovenia.
- Modern, internationally comparable and current study programmes that place the faculty among the most desirable educational and research institutions in the field of health sciences in our country and beyond.
- First doctoral study programme Nursing Care in Slovenia.
- First master's study programme Nursing Care with modern study options.
- First postgraduate master's study option modelled on education of advanced nursing practice.
- Interfaculty master's study programme Management in Health Care and Social Organizations.
- Supplementary study programmes.
- Active networking and cooperation with renowned domestic and foreign higher education teachers, associates, researchers and practitioners.
- Large selection of study contents at the faculty, university and international partner institutions.
- Participation in many activities at the faculty and the university.
- Attractive and wide choice for international student and staff exchange.
- High employability of graduates at home and abroad.
- Concern for the excellence of graduates.

What can the University of Maribor offer me?

The University of Maribor is with its 19 members (17 faculties, University Library and Student Dormitories) the second largest and oldest university in Slovenia. It has about 13,500 students and approximately 2,000 employees and has an important role in the region. Since the Faculty of Health Sciences is a member of the University of Maribor, our students can benefit from all the advantages of university environment as a whole. The University offers a remarkable choice of study fields, allowing each student to choose courses offered by other faculties, has well equipped and affordable student dormitories, a good sports infrastructure allowing the students to take part in well organised sports activities, a wide range of other extracurricular activities, organised student meals, a university and faculty library system, and much more.

We are most proud of the fact that the students at our university have open doors to more than 350 universities around the world. Erasmus Student Network (ESN) Maribor was established in 2001, as an independent association, which is working hand in hand with the International relations office of the University of Maribor. The mission of ESN Maribor is to help with the integration of Erasmus and other foreign students into the local environment. It is part of the Erasmus Student Network and includes Slovenian student volunteers who were or are going on a mobility.

With professional and academic 1st cycle study programmes the University of Maribor members offer students an excellent opportunity for building their career path. Acquired competencies and active participation in projects and practical training with future employers enable students to quickly and successfully enter the labour market and at the same time enable them to continue their studies at 2nd and 3rd cycle study programmes.
